

# Code Analyzer for Java

QJ-Pro is a comprehensive software inspection tool targeted towards the software developer. Read the [PDF](#) brochure and concepts for an understanding of what the product does.

Developers can automatically inspect their Java source code and improve their Java programming skills as they write their programs. QJ-Pro provides descriptive Java patterns explaining error prone code constructs and providing solutions for it.

QJ-Pro checks:

- conformance to coding standards,
- misuse of the Java language,
- best practice conformance
- code structure and
- potential bugs at the earliest stages of development.

QJ-Pro default supports over 200 rules some of which can be used to instantiate new customized rules.
